

Doxygen

Pieter P

These are instructions to build Doxygen from source.

```
1 cd /tmp
2 git clone --branch Release_1_8_16 --depth 1 https://github.com/doxygen/doxygen.git
3 mkdir doxygen/build && cd doxygen/build
4 cmake -G "Unix Makefiles" -DCMAKE_INSTALL_PREFIX=$HOME/.local ..
5 make -j`nproc`
6 make install
```

Make sure that `~/.local/bin` is in your `$PATH`.

You can download the shell script here: [doxygen.sh](#)

Tested on

- Ubuntu 16.04
 - Ubuntu 18.04
 - CentOS 7
-
